Iam a passionate Software Engineer and fast learner who enjoys exploring new technologies and solving complex problems through innovative, effective solutions. With a strong commitment to continuous learning and perseverance, I can make anything happen.

Skills

- Programming Language : Go (Golang), Python, Java, Javascript, Typescript, C, SQL
- Frameworks : Next.js, Vue.js, Spring Boot, Laravel
- Soft skills : Leadership, Time management, Teaching, Problem solving

Education

Universitas Bina Nusantara - **Alam Sutera** Sep 2021 - Feb 2025

Bachelor of Computer Science, 3.94/4.00

Working Experiences

Indomobil Group Aug 2025 - Present

Fullstack Engineer

- Migrated a legacy monolithic management system to a scalable microservices architecture by using Python and Golang for the programming language, integrating Redis for caching and RabbitMQ for background processing and event driven communication.
- Leveraged AI powered development tools, including Cursor and Google Antigravity, to accelerate the software development lifecycle through decision making support, implementation, and test creation. Reduced task completion time by 64% compared to initial time estimates.
- Architected and developed a Go based aggregation service that collects data from multiple services and synchronizing updates through RabbitMQ event driven messaging, reducing query execution time by 76%.
- Architected and developed an end to end Role Based (RBAC) and User Based Access Control (UBAC) system for the Indomobil Management System, pairing a Python backend with a Next.js frontend to secure user access across the application.
- Developed Go based reporting service that aggregates data from multi service and generates structured reports using Mako templates.
- Developed and integrated interactive frontend features using Next.js for iMove, Indomobil's vehicle manufacturing platform, connecting frontend workflows with backend services and APIs.
- Maintained and optimized 253 menus across two services, improving application latency and resolving functional bugs to enhance system reliability.

Blibli.com Feb 2024 - Feb 2025

Fullstack Engineer

- Collaborated with a world class development team to deliver features that increased Blibli.com’s New Transaction Users.
- Translated UI/UX designs from Figma into responsive and high performance frontend features using Vue.js.
- Develop and optimized backend services with Java Springboot contributing to 100% on scope delivery.
- Improving performance by integrating Redis for data caching and Kafka for event driven messaging to enhance application scalability.
- Refactored and patched existing codebases to improve performance, maintainability, and readability.
- Collaborated with the QA team to identify and resolve bugs across frontend and backend systems.
- Created comprehensive unit and integration tests for both frontend and backend services to ensure code reliability and code coverage.

Dacode Sep 2022 - Jan 2025

Founder and Mentor

- Founded and led a bootcamp, teaching over 700 students through comprehensive lectures across more than 6 subjects.

Organisational Experience

Binus University Sep 2022 - Feb 2024

Scholarship Mentor

- Mentored groups of 1–6 students with the goal of enhancing their academic achievement.

Achievements

- **Graduated from Merry Riana School of Public Speaking** (2021): Practiced and improved public speaking skills through regular presentations and speaking engagements.
- **2nd Place – UI/UX Competition, HIMASISKO Sriwijaya University.** (2022): Collaborated with two teammates to create UI designs and conduct UX research based on the proposed design concepts.
- **3rd Place – IT Business Case Competition, Satya Wacana Christian University.** (2023): Collaborating with two partners to build an IT based business solution aimed at addressing real world challenges.
